Tbsp= Tablespoon Tsp= Teaspoon

Other foods to include in diet

Protein Sources

- Legumes and Beans: Chickpeas, lentils, kidney beans, and black beans. These can be used in dishes like dal, chana masala, and rajma.
- Tofu, Paneer, Egg white, Chicken, Fish: Excellent protein sources that can be added to curries or salads.

Whole Grains

- Brown Rice, Quinoa, and Barley: Serve as a good base for meals and are rich in fiber.
- Whole Wheat and Multi-Grain Chapatis: Provide essential fibers and B vitamins.
- Oats: Can be used for breakfast porridge or in baking as a healthier grain option.

Fruits and Vegetables

- Leafy Greens: Spinach, kale, and mustard greens. These can be cooked or used in smoothies for iron and vitamins.
- Cruciferous Vegetables: Broccoli, cauliflower, and cabbage, cooked to improve digestibility.
- Bright-Colored Vegetables and Fruits: Carrots, beets, bell peppers, oranges, and berries. They are high in vitamins, minerals, and antioxidants.

Healthy Fats

- Olives and Olive Oil: Use in cooking or as a dressing for salads for heart-healthy fats.
- Nuts and Nut Butters: Almonds, walnuts, and their butters are good sources of healthy fats and protein.
- Use coconut oil, as it contains MCT (medium chain triglyceride), if you choose any other oil, it's should not more than 500ml/month/person.

Hydration

- Water: Essential for maintaining hydration, aim for 8-10 glasses a day.
- Herbal Teas: Such as chamomile, ginger, or peppermint, can aid in digestion and relaxation.
- Coconut Water: A natural electrolyte to help stay hydrated.

Foods to must avoid in diet:

High-Fat and Fried Foods

- Deep-fried snacks: Such as samosas, pakoras, bhajis, and fried chips.
- High-fat dairy products: Including butter, cream, and high-fat cheeses.

Spicy and salty foods

- Spicy curries: Dishes high in hot spices and chili can irritate the stomach and digestive tract.
- Hot sauces and pickles: These can also cause discomfort and should be minimized or avoided.
- Chips, processed snacks, and foods high in sodium

Refined and Processed foods

- Cakes, pastries, white bread and sweetmeats: High in sugar and often containing dairy, which is to be avoided.
- Sugary drinks: Including sodas, sweetened teas, and fruit juices with added sugars.
- Canned soups and vegetables: Often high in sodium and preservatives.
- Ready-made meals and instant noodles: Contain additives and lack the nutritional value needed for recovery.

Certain Raw Vegetables and Fruits

- Fruits with tough skins or seeds: Some patients may find these hard to digest, such as berries with seeds or unpeeled apples.
- Excessive use of strong herbs and spices: While some spices can be beneficial, overly strong or hot spices should be avoided due to potential irritation to the digestive system.

Beverages

- Caffeinated and carbonated drinks: Coffee, strong tea, and some energy drinks can lead to dehydration.
- Alcoholic beverages: Can interfere with some medications and the overall healing process.
- drinks: Soda and sparkling water might cause gas and bloating.

What to eat during Nausea or Vomiting?

Light, Bland Foods

- Rice and Khichdi: Plain white rice or moong dal khichdi are easy on the stomach and can provide energy without causing distress.
- Crackers or Dry Toast: Plain crackers or toast can help absorb stomach acids and ease nausea.

Fluids

- Ginger Tea: Ginger has natural anti-nausea properties. A mild ginger tea can soothe the stomach.
- Peppermint Tea: Like ginger, peppermint can help reduce feelings of nausea.
- Coconut Water: It's hydrating and can be easier to keep down than plain water.
- Clear Soups and Broths: Vegetable broths or clear soups provide hydration and nutrients without being too heavy.

Small, Frequent Meals

- Eating small amounts more frequently throughout the day instead of three large meals can help keep nausea at bay.
- Foods that are too hot or too cold might trigger nausea. Room temperature foods are generally more tolerable.

Smoothies and Liquid Meals

- Fruit Smoothies: Made with non-dairy milk and mild fruits like bananas or peaches. Avoid too much acidity or sweetness.
- Vegetable Juices: Freshly prepared, mild vegetable juices can be a good way to get nutrients when solid food is unappealing.

Protein Sources

- Tofu and Paneer: Soft textures and mild flavors can make tofu and paneer good protein options when feeling nauseous.

Simple Vegetables and Fruits

- Boiled Potatoes: Easy to digest and can be eaten plain or with a small amount of salt.
- Steamed Vegetables: Carrots, peas, and green beans are mild and provide nutrients without causing stomach upset.
- Bananas: Easy to digest and can help replenish potassium.
- In some cases, ginger supplements may be recommended. However, always consult with a healthcare provider before adding any supplements to your diet during chemotherapy.

THE HUMAN SPIRIT IS STRONGER THAN ANYTHING THAT CAN HAPPEN TO IT!

Thanks and Regards
